

12-Make Recording

There are two parts needed to make recorded calls.

Part 1 - Planning Recordings, end up as Wav files. Wav files can be listened to and downloaded. Often, when you make many wav files, it is best to plan the identification of name, of wav files, prior to making recordings. In this system, you can label the future names, of recordings, that were not created yet. For example, let's say that you want to make recordings, of your son's eleventh birthday party. Then you set the "Category" in the systems "Options" page before you create recordings.

With this system, you can also change the "Category" name of recordings, AFTER the recording has been created. This feature is described on the "Report" page.-

Part 2 Making the Recordings.

All of the recordings are made by you, using your phone. (Either Land Line or Mobile Phone)
