

25 Record Meeting-Page 1

Here we describe the "RecordCall Meeting".

A leader, which we call the RecordCall Meeting Leader, establishes a RecordCall Meeting, which can either be a Local Meeting, or a Global Meeting. and creates an Account Number and a Secondary password for the RecordCall Meeting. The Account Number is the phone number, that the RecordCall Meeting leader will be using.

The RecordCall Meeting Leader invites attendees to the RecordCall Meeting.

Each attendee will use that assigned Account Number and Secondary Password, when they want to hear the opening voice message from the RecordCall Meeting Leader. Each attendee can immediately speak, by using their own phone number as their Account Number. Each attendee will add the secondary password to their own list of their list of Secondary Passwords. In this manner all attendees use their own Account Number to speak assigned secondary password, and leave a voice message to the attendee group, which includes the Meeting Leader. All attendees become active in listening and speaking, all, at the same time.

The RecordCall Meeting can be global, and there is no need, for anybody to travel, to be part of this "RecordCall Meeting"

This is a comparison, between the "RecordCall Meeting" and a "Zoom Meeting".

The RecordCall Meeting works by one person creating and managing a "RecordCall Meeting". That person is the RecordCall Meeting Leader.

Here's how the RecordCall Meeting works: The RecordCall Meeting Leader creates the content, and uses RecordCall to voice record that content. The meeting leader selects a RecordCall Meeting number, which identifies the RecordCall Meeting, AND is also the password for all Members, who are the participants in the RecordCall Meeting.

During the time that the RecordCall Meeting Leader is preparing the content, no member has been contacted, or has been notified about the upcoming RecordCall Meeting.

The RecordCall Meeting does not happen at a certain time, like a Zoom Meeting does, and RecordCall Meeting members, do not have to schedule their time, to participate in the RecordCall Meeting. After the RecordCall Meeting Leader made the voice recording of the content, the RecordCall Meeting Leader sends a text to each member, announcing the RecordCall Meeting, and including the RecordCall Meeting password, in the text invitation. The invitation would also include a time frame, for when the members, voice recorded responses will have to be done. For example, say the text was sent on February 22, the response date may be on or before February 25.

25 Record Meeting-Page 2

At Record Meetings, no one has to interrupt their schedule; every member has time, to focus on the meeting issue

Every member, can record a response, regarding the meeting content.

Every member can hear every other members response, and the Meeting Leader, of course, hears every members response. Obviously the Meeting Leader is fully aware of all comments, and suggestions, and then will decide what the next step will be. Another feature regarding the RecordCall Meeting is that every word spoken, from the Meeting Leader, to each Member, is permanently recorded, and is available for future review.

Regarding a Zoom Meeting, participants have to be some place at the same time, disregarding time zones.
