

32 Three Kinds of Recordings

This page presents the three ways you can make recordings.

First

Here, you can make a simple Tape Recorder type of call. All you do is dial the phone number "YesRecords", (937 732-6737) You will hear a slight bell and then the recording will begin. When you're done you hang up.

Second

Here, you can make a recorded call. All you do is dial the phone number, "RecordCall" (732 673-2255). You will hear a prompt that will say, enter the 10-digit phone number, that you want to call. The system will automatically, make a recorded call, to the phone number that you entered. You will be on a recorded call.

Third

Record a call, that you received. This feature, does not work on land lines. It only works on iPhones and Android Phones

Follow the steps below. a) answer the call

b) find favorites

c) touch Record

d) wait for "merge calls" to light up

e) touch "merge calls".

The call is now being recorded. The entire procedure b) through e) takes about 4 seconds.

We suggest, that after you answer the call, you don't say hello, or speak, until you press the "merge button".

Then you can speak, and tell the caller that the call is being recorded.

The above, "Third" procedure, has been patented, with the following detail.

Title: System and Method for Recording a Conversation

Patent Number: US 8,571,526

Date: October 29, 2013

Assignee: Just Calling, LLC Cranbury, NJ (US)

Provisional application No. 61/204,479, filed on Jan. 7, 2009

ABSTRACT

"A system and method for recording a session is provided. One session related to first and second parties may be established.

Another session related to the first party and a recording server may be established.

The sessions may be joined and the common session may be recorded by the recording server.

A recorded session may be recorded by the recording server.

A recorded session may be stored and played back"
